

Exercise. Draw the constellation, label the brightest star, and give the Roman and English names for the constellation.

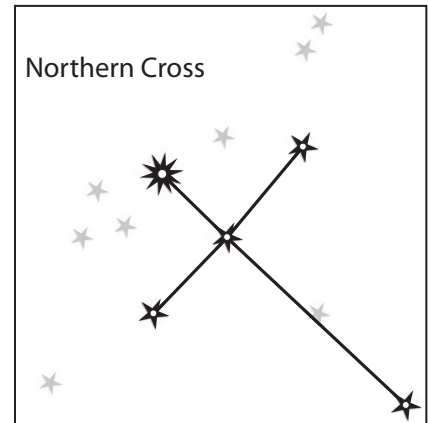

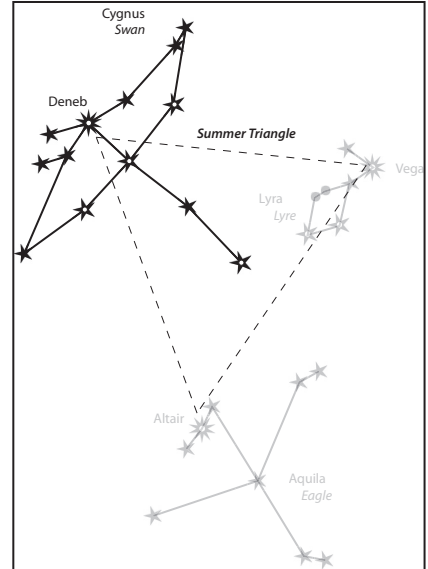

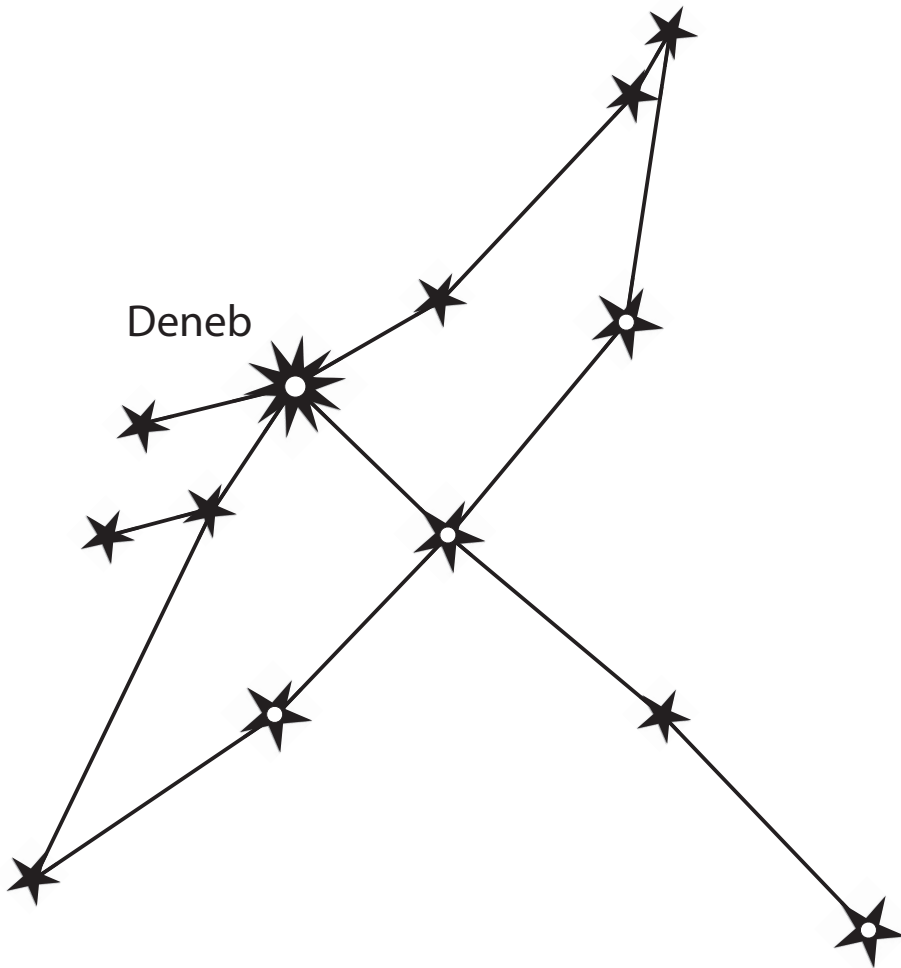

Aquila

Eagle

15 Brightest Stars	Constellation
1. Sirius	
2. Arcturus	
3. Vega	Lyra
4. Capella	
5. Rigel	
6. Procyon	
7. Betelgeuse	
8. Altair	Aquila
9. Aldebaran	
10. Antares	
11. Spica	
12. Pollux	
13. Fomalhaut	
14. Deneb	
15. Regulus	

CYGNUS

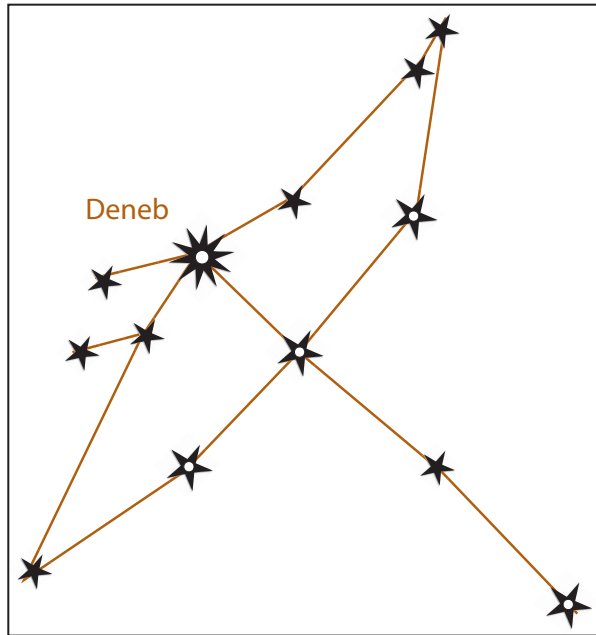

Cygnus (*Swan*)

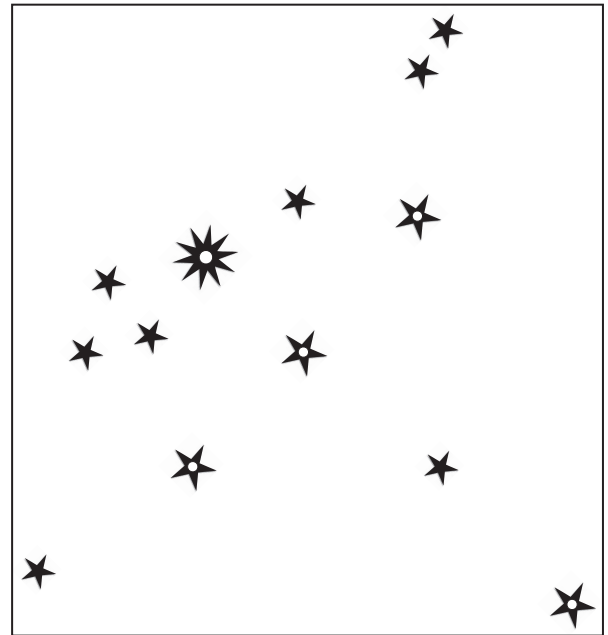

Cygnus is a Latinized Greek word meaning "swan," and has been identified with several swans of Greek mythology. Zeus disguised himself as a swan to seduce Leda (*D'Aulaires' Book of Greek Myths*, p. 182), Orpheus was transformed into a swan, and King Cygnus was transformed into a swan.

In the figure, you can see the swan's broad wings in flight, behind its head and long neck. A prominent feature of Cygnus is the asterism known as the Northern Cross, formed by the five brightest stars in the constellation

Exercise. Draw the constellation, label the brightest star, and give the Roman and English names for the constellation.
